Lead Frontend Developer with 6+ years of experience building production interfaces in React, Vue and TypeScript. At RMRP, a GTA V roleplay project with 5,300+ peak concurrent players, I own the frontend architecture and lead the frontend team: I architected the new in-game HUD from scratch and delivered it as the team's largest release. A full-stack background in Node.js and PostgreSQL lets me take features from API to UI. Earlier, in Web3, I built backend systems serving 50,000+ wallets and wrote Solidity smart contracts.

EXPERIENCE

Lead Frontend Developer · RMRP

Dec 2025 – Present

- Lead the frontend team of a GTA V roleplay project with 5,300+ peak concurrent players: own technical planning, task distribution and code review.
- Own the frontend architecture: designed the architecture of the new in-game HUD from scratch, presented it to management and secured approval.
- Delivered the team's largest release, a complete in-game HUD rework: together with the team, rewrote 30+ widgets and screens and replaced most of the legacy UI.
- Work full-stack when needed, taking features end to end: API, database, UI.

Software Engineer · NFD.gg

Jan 2024 – Sep 2025

- Planned and coordinated a ~6-month rewrite of a commercial product's core within a team of 3 developers, distributing the work.
- Refactored the legacy Electron application, removing 100K+ lines of outdated and unused code.
- Designed the new backend: 11 products were built on it before the business closed the project ahead of the new version's public release.

Blockchain Developer · AD Hunter

May 2020 – Jan 2024

- Engineered backend systems serving 50,000+ active wallets and 1.5M+ mainnet transactions.
- Built Solidity smart contracts and backend features for a product that gained 24K+ new users in a year.
- Authored technical documentation and streamlined the code structure to keep the codebase maintainable.

Creator & Solo Developer · Crypto Hamster

Mar 2023 – Oct 2023

- Built a cross-chain transaction automation product independently, from idea to launch; it grew from a pet project into a commercially successful product.
- Designed the architecture and implemented the backend and Web3 logic.

SKILLS

Core	TypeScript, React, Vue, JavaScript
Frontend	Next.js, Redux, Electron, Tailwind CSS
Backend	Node.js, Express, PostgreSQL, Prisma, Redis, REST APIs
Web3	Solidity, Smart Contracts, dApps
Tooling	Git, Docker, CI/CD, Vite, Vitest
Leadership	Frontend Architecture, Team Leadership, Code Review, Technical Planning, Technical Documentation
Languages	Russian (native), English (B2)
